WHY THIS GUIDE EXISTS

WHERE AM I RIGHT NOW IN THE 13 MOONS?

If you have spent any time with the **13 Moon Calendar**, one question tends to arrive quickly: *"Today is an ordinary calendar date — so which Moon am I actually in, and what day of that Moon is it?"*

The original calendar was designed to be lived **symbolically** — as a rhythm you can begin at any moment, simply by calling your first day "Moon 1, Day 1." That freedom is intentional, and it remains completely valid.

But many readers asked for something more concrete: a simple, fixed way to line the 13 Moons up against the ordinary Gregorian dates on their phone, so they can glance at any date and instantly know where they stand.

This companion guide answers that request. It offers **one clear alignment system** — beginning each year on *July 26* — together with a full conversion table, worked examples, and a one-page cheat sheet. With it, any Gregorian date becomes easy to translate into a Moon and a Day.

Nothing here replaces or changes the original calendar. This is simply a **practical bridge** between two ways of counting time — the everyday and the lunar — so you can move between them without losing your place.

You do not need to abandon your everyday calendar to live by the Moons. You only need a way to translate between them. That is all this guide is — a quiet translator.

THE METHOD, STEP BY STEP

HOW THE ALIGNMENT WORKS

This guide uses a single, fixed anchor point. Once you know it, the whole year unfolds in a steady, predictable rhythm — every Moon exactly 28 days long.

1 JULY 26 = MOON 1, DAY 1

The year of Moons begins on **July 26**. This is the first day of the **Moon of the Ember** — the spark of the whole cycle.

2 EVERY 28 DAYS, A NEW MOON BEGINS

Each Moon lasts exactly **28 days** — four perfect weeks. When one Moon completes on its 28th day, the next Moon begins the very next day on its own Day 1. There are no uneven months here.

3 JULY 25 = THE DAY OUT OF TIME

Thirteen Moons of 28 days total 364 days. The 365th day — **July 25**, the day before the cycle restarts — is the *Day Out of Time*: a day belonging to no Moon, reserved for rest, reflection, and simply being.

4 OR BEGIN FROM MOON 1, DAY 1 — TODAY

You are never required to use the July 26 dates. If you prefer, **call today your Moon 1, Day 1** and let the rhythm flow from there. The July 26 system is a shared reference point; the symbolic start is a personal one. Both are correct.

13 Moons × 28 Days = 364 days, + 1 Day Out of Time = a complete 365-day year. The structure never drifts — only the lens changes.

THE MASTER REFERENCE

FULL CONVERSION TABLE

Each Moon spans exactly 28 days. Find today's Gregorian date in the range, and you have found your Moon.

MOON	MOON NAME	GREGORIAN DATE RANGE
1	 MOON OF THE EMBER	Jul 26 – Aug 22
2	 MOON OF THE BREATH	Aug 23 – Sep 19
3	 MOON OF THE DEEP WELL	Sep 20 – Oct 17
4	 MOON OF THE UNFOLDING LEAF	Oct 18 – Nov 14
5	 MOON OF THE SERPENT'S COIL	Nov 15 – Dec 12
6	 MOON OF THE MIRROR LAKE	Dec 13 – Jan 9
7	 MOON OF THE STORM	Jan 10 – Feb 6
8	 MOON OF THE GOLDEN SUN	Feb 7 – Mar 6
9	 MOON OF THE SILVER RIVER	Mar 7 – Apr 3
10	 MOON OF THE OPEN HEART	Apr 4 – May 1
11	 MOON OF THE TRICKSTER	May 2 – May 29
12	 MOON OF THE WISE ELDER	May 30 – Jun 26
13	 MOON OF THE INFINITE SKY	Jun 27 – Jul 24
	 DAY OUT OF TIME	July 25

To find your **Day** within a Moon: count from the Moon's start date as Day 1. For example, the Moon of the Ember begins July 26 (Day 1), so August 1 is Day 7, and August 22 is Day 28 — the final day.

THE TWO-STEP FORMULA

1. FIND WHICH DATE RANGE TODAY FALLS IN → THAT IS YOUR **MOON**.
2. COUNT FROM THAT MOON'S START DATE (= DAY 1) → THAT IS YOUR **DAY**.

COMMON QUESTIONS

FREQUENTLY ASKED

Q. HOW DO I FIND MY CURRENT MOON?

Look at today's ordinary calendar date and find which range it falls into on the **Full Conversion Table** (page 4) or the **Quick Reference** (page 7). That range tells you your Moon. Then count from that Moon's start date — counting the start date as Day 1 — to find your Day.

Q. WHAT IS THE DAY OUT OF TIME?

Thirteen Moons of 28 days each add up to 364 days. A full year has 365. The single remaining day — **July 25**, the day before the cycle begins again — is the *Day Out of Time*. It belongs to no Moon and carries no count. It is a day for rest, reflection, gratitude, and simply being — exactly as described in your 13 Moon Calendar.

Q. DO I HAVE TO FOLLOW THE GREGORIAN DATES?

No. The July 26 alignment is offered as a **shared reference point** — useful if you want everyone working from the same dates, or if you simply like the structure. But it is entirely optional. The Moons can be lived purely symbolically.

Q. CAN I START FROM MOON 1, DAY 1 INSTEAD?

Yes — and many people prefer this. Simply declare **today** to be Moon 1, Day 1, and let each Moon run 28 days from there. This is the original spirit of the calendar: a rhythm you can begin in any moment. Use whichever approach feels more alive to you.

Q. IS THIS SYMBOLIC OR OFFICIAL?

It is **symbolic**. The July 26 alignment is a practical, reflective convention — not a scientific, historical, or officially adopted calendar. It exists to help you connect the 13 Moons with everyday dates, nothing more. *(In leap years, February 29 is simply treated as an uncounted day so the dates above stay aligned — July 26 always remains Moon 1, Day 1.)*

A NOTE BEFORE YOU BEGIN

A SYMBOLIC BRIDGE, NOT A REPLACEMENT

This guide uses a symbolic July 26 alignment system to help users connect the 13 Moon Calendar with conventional dates. It is intended as a *reflective and spiritual tool* and is not presented as a scientific, historical, or official calendar replacement.

Various cultures throughout history have followed lunar and 13-month calendars. This companion draws on that contemplative spirit while making no specific historical claim. The July 26 start date is offered as one consistent, practical reference among many possible ones — use it as a lens, never a doctrine. Continue to rely on your everyday calendar for all practical, civic, and scheduling needs.

"THE CALENDAR DOES NOT ASK YOU TO KEEP UP. IT ASKS YOU TO KEEP RETURNING."
